What is Bootstrap?

- Framework for building responsive, mobile-first sites and applications.
- Use coding blocks in order to assist you in setting up.
- Designs for mobile first, then scales up components as necessary.
 - Built on a 12 column grid responsive layout

Getting Started

- Sketch it out
- Read through documentation
- Layout proper file structure
- Establish some basic styling guidelines

Wireframe Sketch

Top It Off

- Utilize responsive styling units
 - VW (Viewport Width)
 - VH (Viewport Height)
 - REM (Root Element)
- Take the bootstrap feel out of it
- Refactor to personal style pattern
